

login form

A login form for a 'Virtual Conference Manager'. The form is centered on a dark, gradient background. It consists of three vertically stacked input fields: 'Username', 'Conference code', and a blue 'Join the conference' button. The text 'Virtual Conference Manager' is displayed in a large, white, sans-serif font at the top of the form area.

Virtual Conference Manager

Username

Conference code

Join the conference

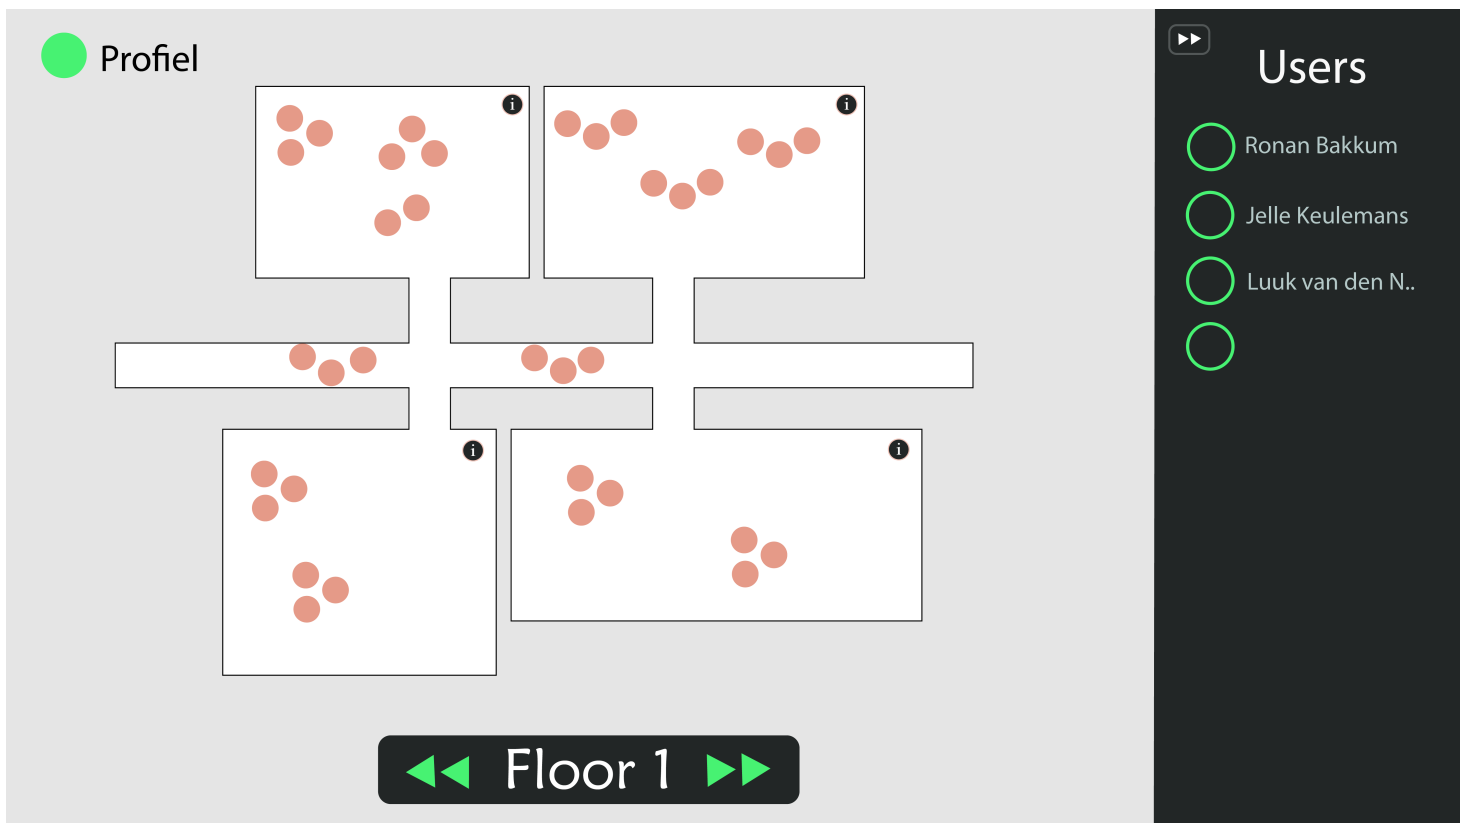

Users log in with a conference code and a username on this form.

We might have to use accounts because uploading images can be a pain. So the upload image button could be added here, but it'd not be as user-friendly.

TODO

- ☐ login with google
- ☐ login with linkedin
- ☐ choose profile image without logging in

overview form

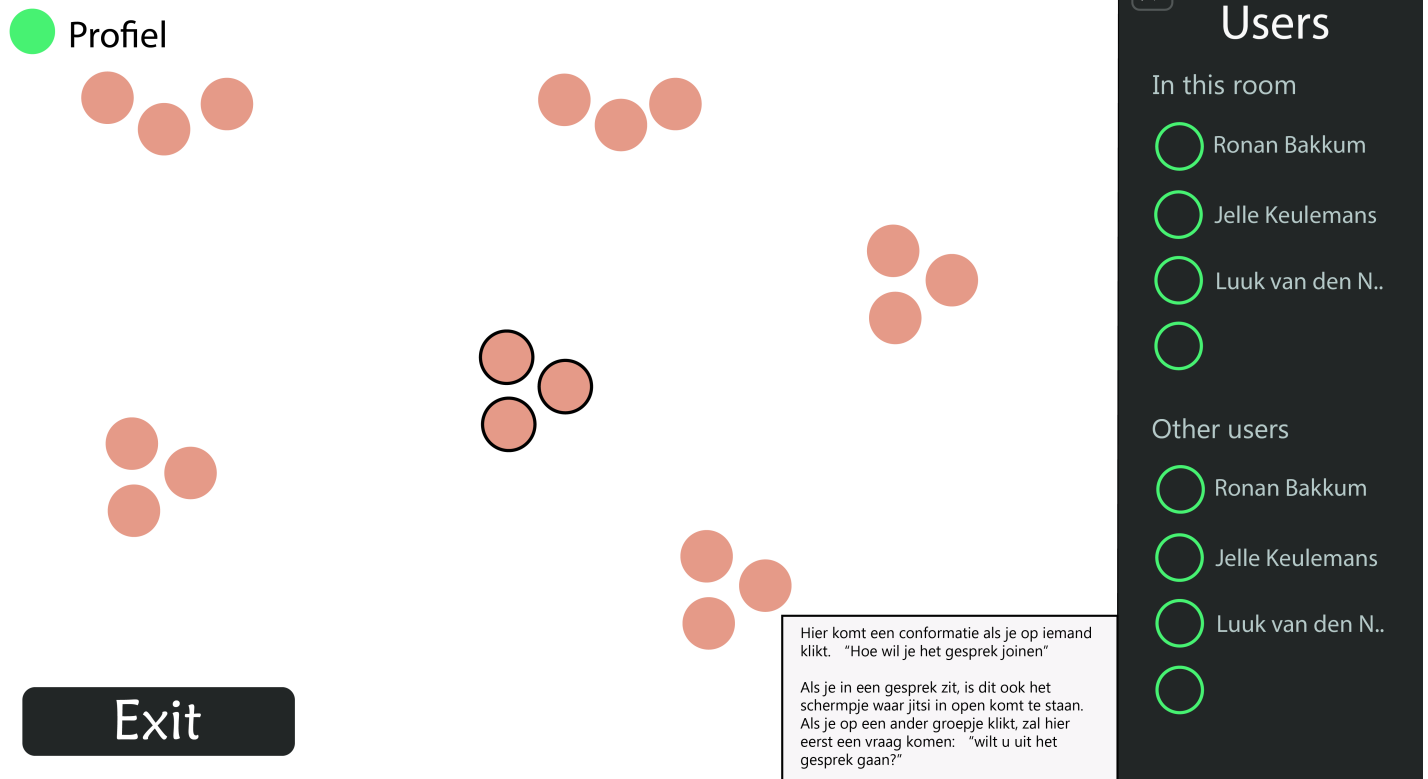

In this form users can:

- see all the floors
- access their profile status and settings
- see all the users and their status
- open a window with all conference info (not added to this design yet)
- click a room or hallway to zoom in and join it.

TODO

- ☐ announcements menu item
- ☐ agenda menu item

room view

In this room users can:

- See users, both in the room and outside the room
- Click groups to join their call

All video logic is included in this room. When exiting the room, the call stops.

real life

You can also start a conversation with someone in real life and update the app so online users can see their avatars and ask to join their conversation.

I think it'd be really nice if on-site members can simply scan some qr code of another person to automatically sync the conversation with the online conversation view.
